## REGAPPING THE NEW REM37BY

Recently, Champion announced the new REM37BY projected core nose spark plug for Lycoming O-235-L2C engines that power various airframe manufacturer's trainer aircraft.

In order to regap the electrodes of this spark plug, we now offer our new adapter, part number GT-208. This new adapter will work in your CT-415 Gap Setting Tool, see illustration below:

Use the same procedure for regapping the REM37BY spark plug as used presently on "E" type electrodes.

Contact your Champion supplier for price and availability.
