## G A S K E T S

(Replacement Elements CF0100 and CF0101)

A gasket kit, part number CFO-205 is packaged with each CF0100 and CF0101 oil filter. The kit contains a copper gasket, a square rubber gasket and a flat rubber gasket, all of which are used to prevent oil leaks in the filter housing assembly.

We have determined that some square gaskets may have been manufactured thicker than called for in our specifications. Please check the thickness of this gasket against the illustration at the right, and return any non-conforming gaskets to the address below for exchange:
