Champion Aviation Products Recip Harnesses

“Heads-Up” regarding lubrication of the spark plug connector end of Champion harnesses.

CAUTION: **Do NOT Use DC-4 Compound On The Red/Orange Insulator Tips of Champion Harnesses**

A recent warranty return revealed complete deterioration of the silicon insulators of a Champion harness. It was determined that the aircraft technician applied DC-4 to the silicone insulators. DC-4 compound is not recommended for lubrication of silicone products.

“Toolbox Tips”...

- DC-4 compound is okay for lubricating **NEOPRENE** insulators and oil filter rubber gaskets.
- DC-200 should be used to lubricate **SILICONE** insulators, gaskets, seals, etc.
- **Best Advice...** DC-200 compound is safe and effective for lubricating **BOTH** silicone and neoprene based products.
