Harness Routing

Champion ignition harnesses for use with various magnetos on small four cylinder Lycoming engines such as P/N CH14001, CH12364 and CH12365 are designed to route bottom spark plug leads across lower rocker box cover retaining screws.

Early engines of this variety may have had bottom spark plug leads clamped to the engine intake pipes with "C" clips. Champion harnesses will not fit this configuration.

We suggest you route bottom spark plug leads in the modern configuration as recommended by leading engine overhaul facilities. High quality insulating clamps are provided in the hardware package for this purpose.
